# **Casting**

## Sand casting:

- 1. Make a mould in the sand (using MDF)
- 2. Using 2 half moulds
- 3. Taper/no corners
- 4. Mould fixed/bolted together
- 5. Poor molten metal into the cast
- 6. Let it cool/remove mould/apply finishes

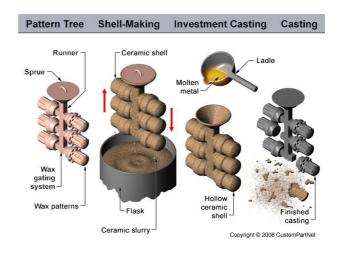

Advantages	Disadvantages
<ul><li>Inexpensive</li><li>Complex shapes can be</li></ul>	<ul> <li>Sand moulds can only be used once</li> </ul>
produced	<ul><li>Surface finish not always</li></ul>
<ul> <li>Large components can be</li> </ul>	good
produced	<ul> <li>Labour intensive</li> </ul>
	<ul> <li>Slow production rate</li> </ul>

Uses: Engine blocks, Garden furniture, Caterpillar tracks

### Investment casting:

- 1. Cold wax mould made
- 2. Was assembled on the sprue before being dipped in liquid ceramic and stucco
- 3. Heated to remove wax and sprue
- 4. Molten metal poured in and allowed to set
- 5. Ceramic shell broken off revealing product

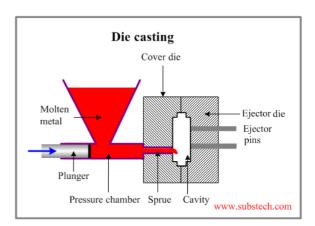

Advantages	Disadvantages
<ul> <li>High quality surface finish</li> </ul>	<ul> <li>Only small castings</li> </ul>
<ul> <li>High dimensional accuracy</li> </ul>	<ul> <li>Expensive</li> </ul>
<ul> <li>Very complex parts can be</li> </ul>	<ul> <li>Labour intensive</li> </ul>
made	<ul> <li>Time consuming to create</li> </ul>
<ul> <li>Any metal can be cast</li> </ul>	wax mould
<ul> <li>No parting lines</li> </ul>	

Uses: Turbine blades, gears, machine parts

#### Die casting:

- 1. Create and lubricate mould
- 2. Molten metal shot under high pressure into the die
- 3. When the die is full, the pressure is sustained until the metal has solidified
- 4. Mould is removed/finishes

Advantages	Disadvantages
<ul> <li>High production rate</li> </ul>	<ul> <li>High set up costs</li> </ul>
<ul> <li>Good surface finish</li> </ul>	<ul> <li>Long lead time</li> </ul>
<ul> <li>Economical</li> </ul>	<ul> <li>Limited sizes</li> </ul>
<ul> <li>Precise parts can be made</li> </ul>	<ul> <li>Must be large scale to be</li> </ul>
·	economical

Uses: Taps, Model cars

### Resin casting:

- 1. Mould created
- 2. Liquid synthetic resin poured into mould
- 3. Resin hardens and mould is removed

Advantages	Disadvantages
<ul> <li>Low cost</li> </ul>	<ul> <li>Toxic fumes can be</li> </ul>
<ul> <li>Quick/simple</li> </ul>	released
<ul> <li>Accurate</li> </ul>	<ul> <li>Can be expensive to get</li> </ul>
Quick setting	moulds

Uses: Collectible toys, models, figures, small scale jewellery

# Plaster of Paris casting (gypsum):

- 1. Mix formula with water
- 2. Poor into mould
- 3. Allow to set

Advantages	Disadvantages
<ul> <li>Low cost</li> </ul>	<ul> <li>Long set time</li> </ul>
<ul> <li>Easy/simple</li> </ul>	<ul> <li>Irritant to skin</li> </ul>
<ul> <li>Durable</li> </ul>	
<ul> <li>Smooth bubble free finish</li> </ul>	

Uses: Bone casts, sculpturing
